Master in Maintenance

Rimses offers maintenance services and service providers a very powerful tool to optimize the organization and productivity of the maintenance work.

Maintenance Management Software

Rimses allows increased availability and reliability of your systems by providing organization, planning, monitoring and adjustment.

Field Service Software

Rimses puts service first for your customers: service by appointment, smooth registration of failures and optimal service in the field.

Be Mobile

With Rimses Mobile Maintenance, technicians can consult, add and process data with their tablet or smartphone. Wherever your technicians are, they have direct access to Rimses to report on activities, materials used and hours worked.

They can immediately consult the work order history in the workplace and create work requests for identified problems. With Rimses Mobile Maintenance, your people have more time for the actual work itself.

Act Compliantly

Rimses supports compliance so companies can respond quickly to regulatory requirements and audits from legislative bodies and inspection agencies with:

• traceability of actions
• document management
• certificate management
• managing training and qualifications of employees.

Work safely

With Rimses Safety, you can actively contribute to safety by integrating the management of safety measures, work permits and LOTO (Lockout-Tagout) in the maintenance software. Rimses Safety helps you with the follow-up and communication concerning safety. You can manage safety standards and make safety verifiable.

All this with one goal in mind: to exclude any risk of a possible industrial accident to prevent severe consequences.

Start with Rimses

Choose the Rimses solution that best fits the current needs of your business and let it evolve at the same paste as your company.
